

## Additional information for Photoshop CS5:

The ReadMe file for the original Photoshop CS4 Panels describes the placement of files of type .mxp, .jsx, .atn, and .8bf. For Photoshop CS5, those instructions must be modified. The individual .jsx, .atn and .8bf files that were downloaded in the package are still correct. The .mxp files are no longer used with Photoshop CS5. Follow these instructions instead.

Place the .8bf (plug-in) files in the C:\\Program Files\\Adobe\\Adobe Photoshop CS5\\Plug-Ins folder.

Place the .jsx (script) file in the C:\\Program Files\\Adobe\\Adobe Photoshop CS5\\Presets\\Scripts folder.

Place the .atn (action) file in any convenient location, and when running Photoshop CS5 use the Load Actions command in the drop-down menu of the Actions panel to load this set of actions.

Place the three folders supplied with this read\_me file, with their contents, in the C:\\Program Files\\Adobe\\Adobe Photoshop CS5\\Plug-Ins\\Panels folder.

Run Photoshop, open any image, and select Window->Extensions-> to load the three panels.
